

Global Financial Crisis Worsens In Spite Of *Lying* Claims By Toronto's Daily Financial Writers

Venezuela Helps Homeless, *National Post* Attacks Abused, ill Homeless!

(venezuelanalysis.com)-- The Venezuelan government approved US\$1.1 billion in funding for universities, institutes, and university colleges, as part of the Bolivarian government's increased support of the superior education system and another US\$1.3 billion for public housing.

Chavez announced his government decided to deliver 14 additional credits to the technology university colleges, which will be used

for the hiring of teachers for the national programs of formation and information laboratories.

Chavez reported investment in the private sector of high level education had been increased as part of a policy designed to increase the number of enrolled students.

He indicated that such investments are in order to guarantee that people with less economic resources have access to higher educa-

tion in private institutions, through scholarships or subsidies.

Housing minister, Francisco Sesto, announced the government also approved of additional spending for public housing, in the amount of \$1.3 billion for now until the end of the year. These funds would be used to construct 39,000 homes, which are to be completed sometime between late 2008 and 2009. Sesto estimated that Venezuela's housing

deficit, which experts believe is currently at 1.8 million homes, can be overcome in eight years by constructing 200,000 new public housing units per year.

Additional funds were also approved to increase to 100,000 the number of members of the mission, "Mothers of the Barrio," which provides a basic income to poor housewives and single mothers after being frazzled by the credit crisis.

Selected Economic Disaster Headlines

Chancellor Darling: 'UK facing worst economic crisis in 60 years'

The UK is facing its worst economic crisis in 60 years, Chancellor Alistair Darling has admitted.

He told the *Guardian* newspaper that the economic downturn would be more "profound and long-lasting" than most people had feared.

Using strong language, Mr Darling acknowledged voters were angry with Labour's handling of the economy.

Shadow chancellor George Osborne said Mr Darling had "let the cat out of the bag" about the state of the economy.

The chancellor admitted the government

had "patently" failed to get its message across that it understood people's concerns about rising living costs and growing job insecurity.

He said that voters were "pissed off" with Labour's handling of the economy, a key issue at the next election, and said it was

"absolutely imperative" that ministers communicated their intentions better.

This coming 12 months will be the most difficult 12 months the Labour party has had in a generation, quite frankly. — Alistair Darling

Gold A Good Bet Against Looming U.S. Currency Disaster

<http://www.321gold.com/editorials/moriarty/moriarty082508.html>

The Good News and the Bad

By Bob Moriarty I wrote recently about a bottom in the metals. The good news is that I think we have seen it. Someone posted an article showing a 25 year chart of the XAU over Gold and it clearly showed we are at the best time to buy gold and shares since 2001 and the 2nd best time in 25 years. So I think we have seen the lows for both gold and shares.

In addition, the gold seasonality chart

U.S. Enduring Weekly Bank Failures

Citizens Bank and Trust Acquires Insured De-

clearly shows the best buying time in the entire year is between the last week of August and the first week of October. We are there and odds favor we have seen a major bottom.

There is some bad news. Much has been written lately about a shortage of physical gold and silver all over the country. There are a couple of issues about the shortage that have not been adequately covered. One of the things that young investors especially need to understand is that 30 years ago, there were far more stamp and coin dealers. For all practical purposes, the stamp dealers have pretty much

gone the way of the buggy whip; they just don't exist any more. I think Miami used to have about 10 good size coin dealers and now there are maybe 3.

So there is no pipeline filled with silver bars and gold coins to the extent there was 30 years ago. All of the silver bars and most of the silver rounds I've seen lately were made in the 1970s and 1980s during silver's last big rise. I'm sure someone is still making bars and rounds but in comparison to the previous stockpile, there isn't much new stuff around except for the Canadian Maples and the US

Thull, and the Federal Deposit Insurance Corporation (FDIC) was named receiver. To protect the depositors, the FDIC entered into a purchase and assumption agreement with Citi-

zens Bank and Trust, Chillicothe, Missouri, to assume the insured deposits of The Columbian Bank and Trust Company.

Another Friday, another bank failure!

Eagles. Those numbers there don't represent much production.

I suspect many investors have bought gold and silver in the last few years and it's pretty much off the market until we see higher prices. I was in my dealer's office last week and the phones were ringing off the hook with people wanting to know if he had anything to sell. He did buy some product while I was there and while his vault wasn't overflowing, he did have product. He refused to sell because his cost was so much higher than spot.

Another Friday, another bank failure!

Be Healthy Or Rot!!
 Researched by Victor The Health Guru

After years of telling people chemotherapy is the only way to try and eliminate cancer, John Hopkins Hospital is finally starting to tell you there is an alternative way.

Cancer Update from John Hopkins:

1. Every person has cancer cells in the body. These cancer cells do not show up in the standard

Tests until they have multiplied to a few billion. When doctors tell cancer patients that there are no more cancer cells in their bodies after treatment, it just means the tests are unable to detect the cancer cells because they have not reached the detectable size.

2. Cancer cells occur between 6 to more than 10 times in a person's lifetime

3. When the person's immune system is strong the cancer cells will be destroyed and prevented

From multiplying and forming tumors.

4. When a person has cancer it indicates the person has multiple nutritional deficiencies. These Could be due to genetic, environmental, food and lifestyle factors.

5. To overcome the multiple nutritional deficiencies, changing diet and > including supplements will strengthen the immune system.

6. Chemotherapy involves poisoning the rapidly-growing cancer cells and also destroys rapidly-growing healthy cells in the bone marrow, gastro-intestinal tract etc, and can cause organ damage, like liver, kidneys, heart, lungs etc.

7. Radiation while destroying cancer cells also burns, scars and damages healthy cells, tissues and organs.

8. Initial treatment with chemotherapy and radiation will often reduce tumor size. However prolonged use of chemotherapy and radiation do not result in more tumor destruc-

tion.
 9 When the body has too much toxic burden from chemotherapy and radiation the immune system is either compromised or destroyed, hence the person can succumb to various kinds of infections and complications.

10. Chemotherapy and radiation can cause cancer cells to mutate and become resistant and difficult to destroy. Surgery can also cause cancer cells to spread to other sites.

11. An effective way to battle cancer is to starve the cancer cells by not feeding it with the foods it needs to multiply.

CANCER CELLS FEED ON:

a. Sugar is a cancer-feeder. By cutting off sugar it cuts off one important food supply to the cancer cells. Sugar substitutes like NutraSweet, Equal, Spoonful, etc are made with Aspartame and it is harmful. A better natural substitute would be Manuka honey or molasses but only in very small amounts. Table salt has a chemical added to make it white in color. Better alternative is Bragg's aminos or sea salt.

B. Milk causes the body to produce mucus, especially in the gastro-intestinal tract.

Cancer feeds on mucus. By cutting off milk and substituting with unsweetened soya milk cancer cells are being starved.

C. Cancer cells thrive in an acid environment. A meat-based diet is acidic and it is best to eat fish, and a little chicken rather than beef or pork. Meat also contains livestock antibiotics, growth hormones and parasites, which are all harmful, especially to people with cancer.

D. A diet made of 80% fresh vegetables and juice, whole grains, seeds, nuts and a little fruits help put the body into an alkaline environment. About 20% can be from cooked food including beans. Fresh vegetable juices provide live enzymes that are easily absorbed and

reach down to cellular levels within 15 minutes to nourish and enhance growth of healthy cells. To obtain live enzymes for building healthy cells try and drink fresh vegetable juice (most vegetables including bean sprouts) and eat some raw vegetables 2 or 3 times a day. Enzymes are destroyed at Temperatures of 104 degrees F (40 degrees

C).E. Avoid coffee, tea, and chocolate, which have high caffeine. Green tea is a better alternative and has cancer-fighting properties. Water-best to drink purified water, or filtered, to avoid known toxins and heavy metals in tap water.

Medical Professionals Finally Get Smart!

Distilled water is acidic, avoid it.

12. Meat protein is

difficult to digest and requires a lot of digestive enzymes. Undigested meat remaining in the intestines become putrified and leads to more toxic buildup.

13. Cancer cell walls have a tough protein covering. By refraining from or eating less meat it frees more enzymes to attack the protein walls of cancer cells and allows the body's killer cells to destroy the cancer cells.

14. Some supplements build up the immune system (IP6, Flor-sence, Essiac, anti-oxidants, vitamins, minerals, EFAs etc.) to enable the body's own killer cells to destroy cancer cells.

Other supplements like vitamin E are known to cause apoptosis, or programmed cell death, the body's normal method of disposing of damaged, unwanted, or unneeded cells.

15. Cancer is a disease of the mind, body, and spirit. A proactive and positive spirit will help the cancer warrior be a survivor. Anger, unforgiveness and bitterness put the body into a stressful and acidic environment. Learn to have a loving and forgiving spirit. Learn to relax and enjoy life.

16. Cancer cells cannot thrive in an oxygenated environment. Exercising daily, and deep breathing help to get more oxygen down to the cellular level. Oxygen therapy is another

means employed to destroy cancer cells.

CANCER UPDATE FROM JOHN HOPKINS HOSPITAL

1. No plastic containers in micro.

2. No water bottles in freezer.

3. No plastic wrap in microwave.

Johns Hopkins has recently sent this out in its newsletters. This information is being circulated at Walter Reed Army Medical Center as well.

Dioxin chemicals causes cancer, especially breast cancer.

Dioxins are highly poisonous to the cells of our bodies.

Don't freeze your plastic bottles with water in them as this releases dioxins from the plastic.

Recently, Dr. Edward Fujimoto, Wellness Program Manager at Castle Hospital, was on a TV program to explain this health hazard. He talked about dioxins and how bad they are for us..

He said that we should not be heating our food in the microwave using plastic containers.

This especially applies to foods that contain fat. He said that the combination of fat, high heat, and plastics releases dioxin into the food and ultimately into the cells of the body.

Instead, he recommends using glass, such as Corning Ware, Pyrex or ceramic containers for heating food. You get the same results, only without the dioxin.

So such things as TV dinners, instant ramen and soups, etc., should be removed from the container and heated in something else.

Paper isn't bad but you don't know what is in the paper. It's just safer to use tempered glass, Corning Ware, etc. He reminded us that a while ago some of the fast food restaurants moved away from the foam containers to paper. The dioxin problem is one of the reasons.

Also, he pointed out that plastic wrap, such as Saran, is just as dangerous when placed over foods to be cooked in the microwave. As the food is nuked, the high heat causes poisonous toxins to actually melt out of the plastic wrap and drip into the food. Cover food with a paper towel instead.
